About me

I'm always learning something new because I believe it's the way to be the best version of yourself. I love to help my coworkers with any knowledge I can bring to them.

Interests

I'm looking for a developer role in a company that values the use of excellent practices, such as clean code, good documentation, and proper testing.

Experience

Backend Developer: BLC Global

Mar-2022 - Present

- Develop RESTful APIs using Java and Spring Boot
- Design and implement business logic using Spring services and components
- Create and maintain database schemas in SQL (MySQL and Postgres)
- Integrate external systems via REST APIs and scheduled jobs
- Write unit and integration tests using JUnit, Mockito, and Spring Boot Test
- Use Flyway for database versioning and migrations
- Implement security layers using Spring Security and JWT
- Collaborate with frontend developers to define API contracts
- Write and maintain technical documentation for backend components

Tools: Java, Spring, Hibernate, JUnit, Mockito, Git, Heroku, SQL (Oracle, Postgres, MySQL). Methodology: Agile
